General Statement Regarding RoHS Compliance

1st November 2018

Dear Customer

We hereby confirm that our range of heat shrinkable, cold shrinkable and pre-moulded rubber products, in both conventional and flame retarded versions, do not contain any of the materials listed in RoHS2 EU Directive 2011/65/EU.

We also confirm our compliance to EU Directive 2005/717/EG and the last European Court Decision C-295/06 regarding the use of Deca-BromoDiphenyl-Ether (DBDE) dated 1st April 2008

We also confirm that our range of heat shrinkable products are halogen free.

The European Court has decided that products containing DBDE are no longer RoHS compliant starting 1st July 2008.

We appreciate your understanding that REPL International Ltd cannot take any legal responsibility for a subsequent downstream contamination at the end user regarding the use of any of the illegal substances.

Please be advised that CE marking clause for the RoHS2 directive 2011/65/EU only applies to finished electrical and electronic equipment.

The use of the CE mark is NOT allowed on any products not in scope of an EU Directive and therefore cannot be applied to heat/cold shrink tubing or moulded components

If you require any further information please contact REPL direct.
